

Steven King, FASLA

Landscape Structures

In his position as Chairman of Landscape Structures Inc. - headquartered in Delano, Minnesota - Steven has transformed his landscape architecture background into a unique entrepreneurial business. Landscape Structures is internationally recognized as one of the premier manufacturers of commercial playground and modular skatepark equipment for parks, schools, churches and daycares. Landscape Structures Inc. is committed to enhancing the quality of children's lives through play by providing quality play environments, protecting the environment, and being responsible in the use of our natural resources. Steven originated the continuous play concept which is used in nearly all of today's playstructures. From playgrounds sized right for the tiniest tots, to the excitement of Skatewave modular skateparks, Landscape Structures knows how to play.

Steven has been honored as Fellow of the American Society of Landscape Architects, Entrepreneur of the Year, Manufacturer of the Year, and with the "G" Mark Award (Japan). In Steven's view, landscape architects' understanding of the natural environment enables them to design and develop the built environment to complement or blend with this natural environment, while satisfying human needs.
